Changing the Registration Policy for
the NETCONF Capability URNs Registry

Abstract

The registration policy for the "Network Configuration Protocol
(NETCONF) Capability URNs" registry, set up by RFC 6241, has turned
out to be unnecessarily strict. This document changes that
registration policy to "IETF Review", allowing registrations from
certain well-reviewed Experimental RFCs, in addition to Standards
Track RFCs.

Status of This Memo

This memo documents an Internet Best Current Practice.

This document is a product of the Internet Engineering Task Force
(IETF). It represents the consensus of the IETF community. It has
received public review and has been approved for publication by the
Internet Engineering Steering Group (IESG). Further information on
BCPs is available in Section 2 of RFC 5741.

1. Introduction

The "Network Configuration Protocol (NETCONF) Capability URNs" registry [RFC6241] was set up with a registration policy of "Standards Action" [RFC5226], allowing registrations only from Standards Track RFCs. This provided thorough review of the specifications that are requesting NETCONF Capability URNs. It has turned out to be desirable to allocate capability URNs for certain Experimental RFCs also, provided those specifications are also carefully reviewed. The existing registration policy is, therefore, unnecessarily strict, requiring exception handling by the IESG. This document changes that registration policy to "IETF Review", which also allows registrations from certain well-reviewed Experimental RFCs, or, for example, corrections to registry errors from Informational RFCs, with IETF review and consensus.

2. IANA Considerations

IANA has changed the registration policy for the "Network Configuration Protocol (NETCONF) Capability URNs" registry to "IETF Review" and has added this document to the registry’s reference field.

Registrations made from RFCs that are not on the Standards Track need to be carefully reviewed through IETF Last Call and in consultation with relevant working groups, such as NETCONF. The Operations and Management Area Directors should confirm that the document has received the appropriate level of review during IESG Evaluation.

3. Security Considerations

This document is purely procedural, and there are no related security considerations.
