Clarifications for Ed25519, Ed448, X25519, and X448 Algorithm Identifiers

Abstract

This document updates RFC 8410 to clarify existing semantics, and specify missing semantics, for key usage bits when used in certificates that support the Ed25519, Ed448, X25519, and X448 Elliptic Curve Cryptography algorithms.

Status of This Memo

This is an Internet Standards Track document.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Further information on Internet Standards is available in Section 2 of RFC 7841.

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at https://www.rfc-editor.org/info/rfc9295.

Code Components extracted from this document must include Revised BSD License text as described in Section 4.e of the Trust Legal Provisions and are provided without warranty as described in the Revised BSD License.
1. Introduction

[RFC8410] specifies the syntax and semantics for the Subject Public Key Information field in certificates that support Ed25519, Ed448, X25519, and X448 Elliptic Curve Cryptography (ECC) algorithms. As part of these semantics, it defines what combinations are permissible for the values of the keyUsage extension. [RFC5280] [RFC8410] did not define what values are not permissible, nor did it refer to keyEncipherment or dataEncipherment. [Err5696] has also been submitted to clarify that keyCertSign is always set in certification authority certificates. To address these changes, this document replaces Section 5 of [RFC8410] with Section 3.

2. Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119] [RFC8174] when, and only when, they appear in all capitals, as shown here.

3. New Section 5 for RFC 8410

The intended application for the key is indicated in the keyUsage certificate extension.

If the keyUsage extension is present in a certificate that indicates id-X25519 or id-X448 in SubjectPublicKeyInfo, then the following MUST be present:
keyAgreement

One of the following MAY also be present:

encipherOnly
decipherOnly

and any of the following MUST NOT be present:

digitalSignature
nonRepudiation
keyEncipherment
dataEncipherment
keyCertSign
cRLSign

If the keyUsage extension is present in an end-entity certificate that indicates id-Ed25519 or id-Ed448 in SubjectPublicKeyInfo, then the keyUsage extension MUST contain at least one of the following:

nonRepudiation
digitalSignature
cRLSign

and any of the following MUST NOT be present:

keyEncipherment
dataEncipherment
keyAgreement
keyCertSign
encipherOnly
decipherOnly

If the keyUsage extension is present in a CRL issuer certificate that indicates id-Ed25519 or id-Ed448 in SubjectPublicKeyInfo, then the keyUsage extension MUST contain:

cRLSign

and zero or more of the following:

nonRepudiation
digitalSignature
and any of the following **MUST NOT** be present:

```plaintext
keyEncipherment
dataEncipherment
keyAgreement
encipherOnly
decipherOnly
```

and if the CRL issuer is also a certification authority, then the keyUsage extension **MUST** also contain:

```plaintext
keyCertSign
```

If the keyUsage extension is present in a certification authority certificate that indicates id-Ed25519 or id-Ed448 in SubjectPublicKeyInfo, then the keyUsage extension **MUST** contain:

```plaintext
keyCertSign
```

and zero or more of the following:

```plaintext
nonRepudiation
digitalSignature
cRLSign
```

and any of the following **MUST NOT** be present:

```plaintext
keyEncipherment
dataEncipherment
keyAgreement
encipherOnly
decipherOnly
```

4. **Security Considerations**

This document introduces no new security considerations beyond those found in [RFC8410].

5. **IANA Considerations**

This document has no IANA actions.

6. **References**

6.1. **Normative References**
6.2. Informative References

Acknowledgments

We would like to thank Russ Housley, Mike Jenkins, and Corey Bonnell for their comments.
